IBM Cloud CLI

The screenshot shows the IBM Cloud CLI installation page in a web browser. The page title is "Installing the stand-alone IBM Cloud CLI". The left sidebar contains a navigation menu with sections: "Get started" (including "Getting started with the IBM Cloud CLI"), "How to" (including "Installing the stand-alone IBM Cloud CLI", "Installing the tools and plug-ins manually", "Installing and using private endpoints", "Extending IBM Cloud CLI with plug-ins", and "Working with multiple sessions with the IBM Cloud CLI"), and "Expand all | Collapse all". The main content area is titled "Run the installer:" and lists instructions for Mac and Linux. A modal dialog box titled "IBM Cloud Command Line Interface - InstallShield Wizard" is open, displaying "The installation completed successfully". The dialog box text states: "To get started, open a terminal window and enter 'ibmcloud help'. Refer to [http://ibm.biz/cli-auto-completion](\"http://ibm.biz/cli-auto-completion\") if you want to enable auto-completion for zsh or bash. IBM Cloud Command Line Interface has a plug-in framework to extend its capability. To install recommended plug-ins and dependencies, run the install script from [http://ibm.biz/install-id](\"http://ibm.biz/install-id\"). For additional plug-in details, see [http://ibm.biz/install-id](\"http://ibm.biz/install-id\"). Starting from version 1.0.0, IBM Cloud CLI no longer bundles the Cloud Foundry CLI by default. To run Cloud Foundry commands via the IBM Cloud CLI, you need to install the Cloud Foundry CLI through 'ibmcloud cf install' command." The dialog box has "Back", "Finish", and "Cancel" buttons. The right sidebar contains a "Feedback" button and a "Cookie Preferences" button.
